\*\*Mid rails are recommended on all Thermo25 panels higher than 1600mm, the absence of mid rails may cause issues with closure particularly on wide double hinged panels. (LL or RR). Please also be advised that sagging on panels over 1600mm in height with no mid rail is not covered by warranty as this is outside of the specified product guidelines and intended product use. "

SCALE 1:1 WHEN PRINTED AT 100%

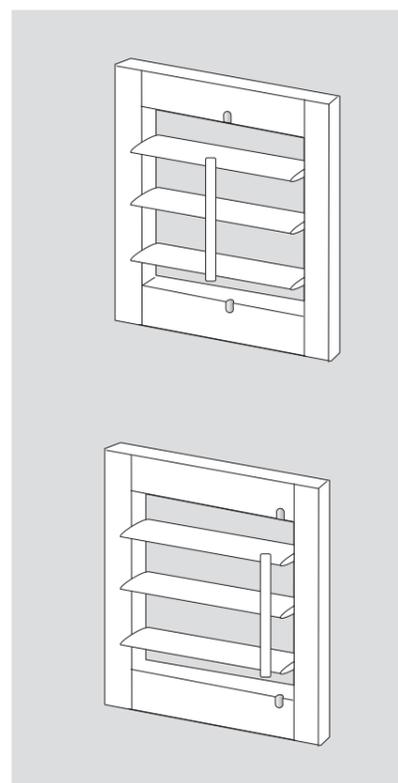

Timber		Thermopoly™
11mm Elliptical Blade	11mm Elliptical Blade	11mm Elliptical Blade
Note: A surcharge applies for 15mm thick blades, please refer to pricelist.		All Blades are reinforced with Aluminium Inserts

# TILT ROD OPTIONS

### Clearview

Clearview tilt is a discreet aluminium rod that connects the louvres. Clearview tilt allows for the most adjustment in the closure of the louvers and is the easiest to service. The tiltrod is on the hinge side (unless requested otherwise). Any panel span over 1200mm in height will be split automatically (unless requested otherwise). The max possible span is 1500mm.

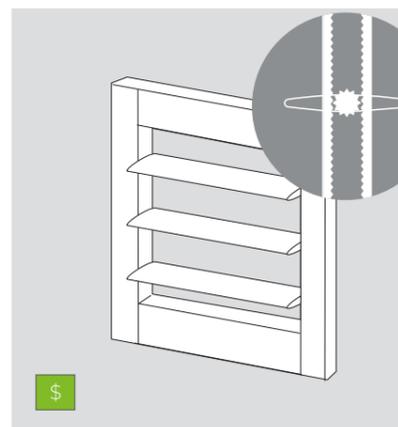

### Centre tilt

Centre tilt is connected to louvres by stainless steel staples on the front of the panel. Centre tilt can span the max the panel can without a mid rail. The Tilt rod is generally in the centre of each panels.

### Offset Tilt

Offset Tilt operates the same as Centre tilt only the tiltrod is installed 50mm in from the edge of the blade on the hinge side (unless requested otherwise).

### Internal Tilt

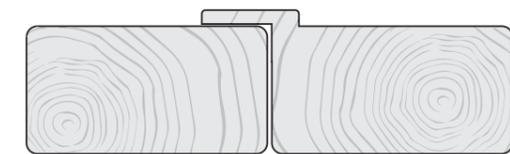

Internal Tilt has no visible tilt rod. The mechanism is inside the stile. It uses a rack & pinon system to connect the blades. Internal tilt max span is 12 louvres. Anything over that is not recommend and not covered by warranty. Internal tilt is a good option for room dividers where the panels are viewed from both sides.

## MEASURING INSTRUCTIONS

### INSIDE MOUNT \_MEASURING INSTRUCTIONS

#### Measurements to be given in millimetres (mm)

- Always measure the depth of the reveal to ensure no mullions, handles or anything else could interfere with the rotation of the blades. Check the frame depth chart for the relevant depth needed for each blade size:

**Hint: Z-frame will bring the shutter panels forward ~10mm**

- Always measure at least 3 places across the width and height.
  - If using an Opening Size Order Form provide the **smallest size** on the form. The Factory will take the deductions listed below.
  - If using a Make Size Order Form – we recommend taking the following deductions from the smallest measured size.

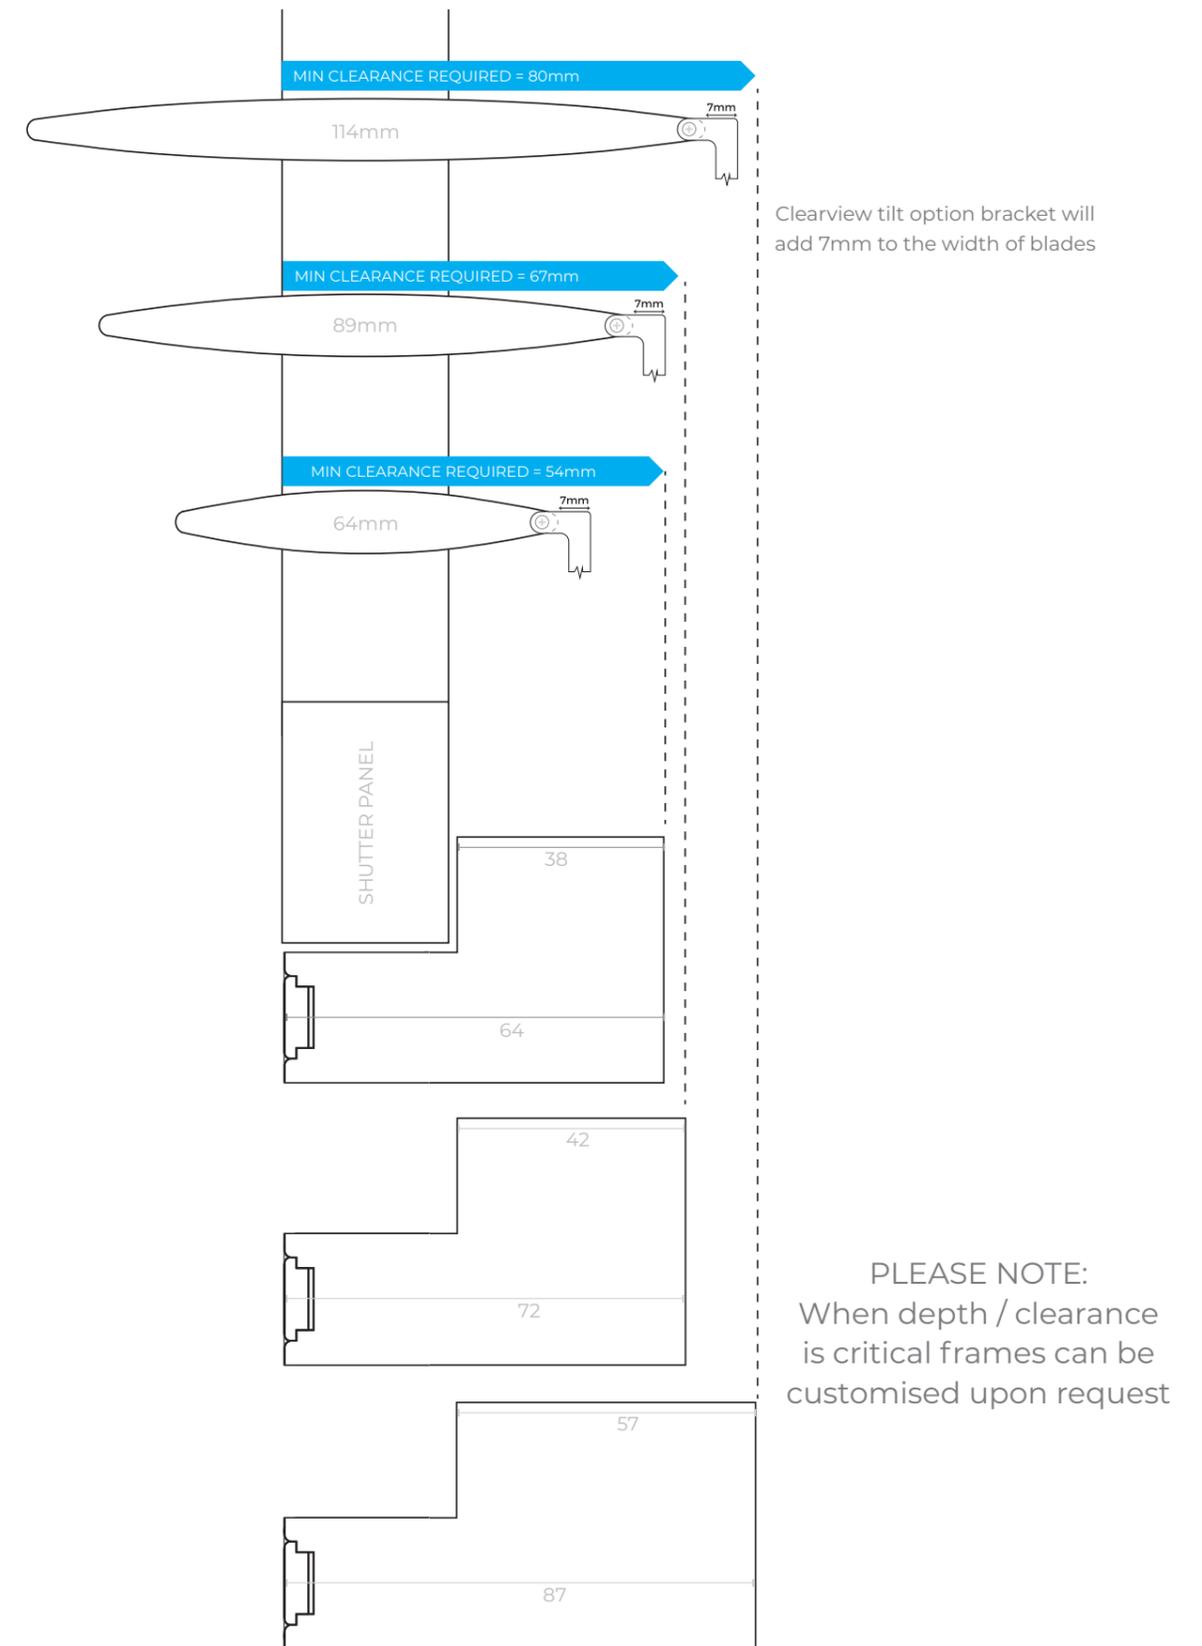

Mounting Method	Width Deduction	Height Deduction
Hinged in Frame (L-Frame, Z-Frame etc.)	3mm	3mm
Non Mortise Hinges without frame – 1 x panel	5mm	6mm
Non Mortise Hinges without frame – 2 + panels	6mm	6mm
Pivot Hinge without frame – 1 x panel	5mm	8mm
Pivot Hinge without frame – 2 + panels	6mm	8mm
Sliding/Bi-Folding	3mm	3mm

### OUTSIDE MOUNT \_MEASURING INSTRUCTIONS

#### Measurements to be given in millimetres (mm)

- Always measure in in at least 3 places across the width and height. Use the **Largest size** for ordering. No deductions will be taken from these sizes.

## OUTSIDE MOUNT \_BLADE /FRAME DEPTH CHART

## MEASURING INSTRUCTIONS

### MID RAILS

When measuring for a Mid Rail, measure from the bottom of the opening to the centre of where you would like the Mid Rail to be positioned. This will be positioned, within a tolerance of **30mm** up or down to maintain even top and bottom rails.

If your Mid Rail position is Critical, tick the box critical mid rail or mention it in the notes section on the order form 'Critical Mid Rail', this will ensure your Mid Rail to be positioned exact. Though the Top and Bottom rails may be of different size.

**Note:** with critical midrails CW Systems & the factory cannot be responsible for uneven Top or Bottom Rails.

Mid Rail

No mid rail   
  1 mid rail   
  2 mid rails   
  3 mid rails

Mid rail critical?  ?

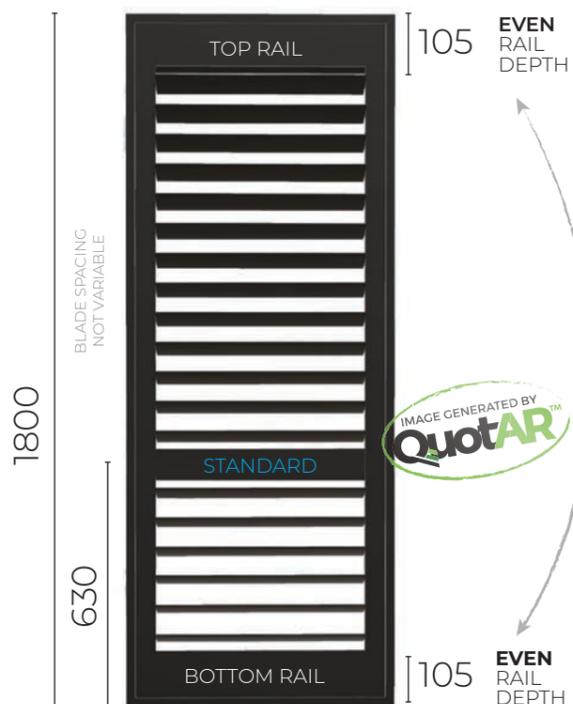

1st mid rail height:

**HINT ?**  
If you leave this blank the mid rail will be put in centre

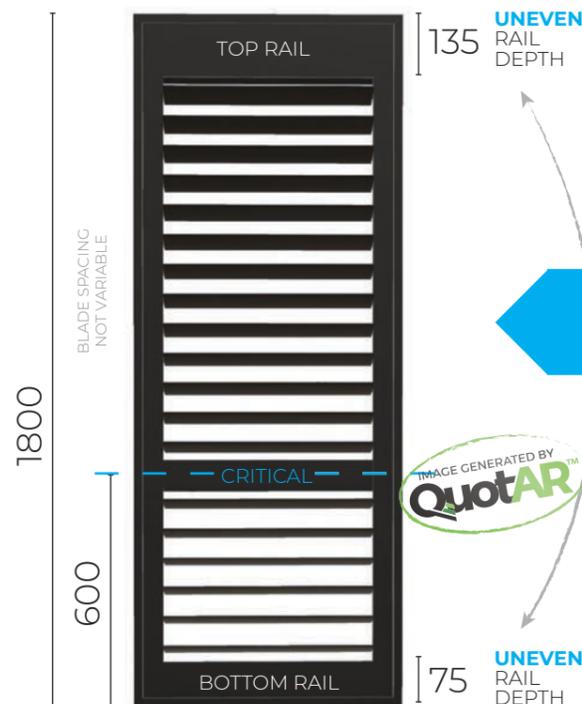

### EXAMPLE PANELS BELOW

The example below shows the same shutter 1800mm tall with a mid rail at 600mm. The standard mid rail is moved to 630mm with even top and bottom rails. With critical mid-rail it is positioned exactly at 600mm but the top rail is bigger than the bottom rail.

#### MID RAILS STANDARD

## HINGED OPTIONS

### HINGE TYPES

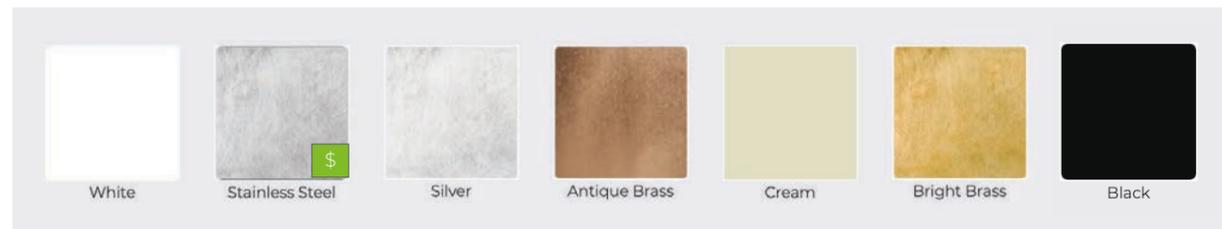

NON MORTISE HINGE

PIVOT HINGE

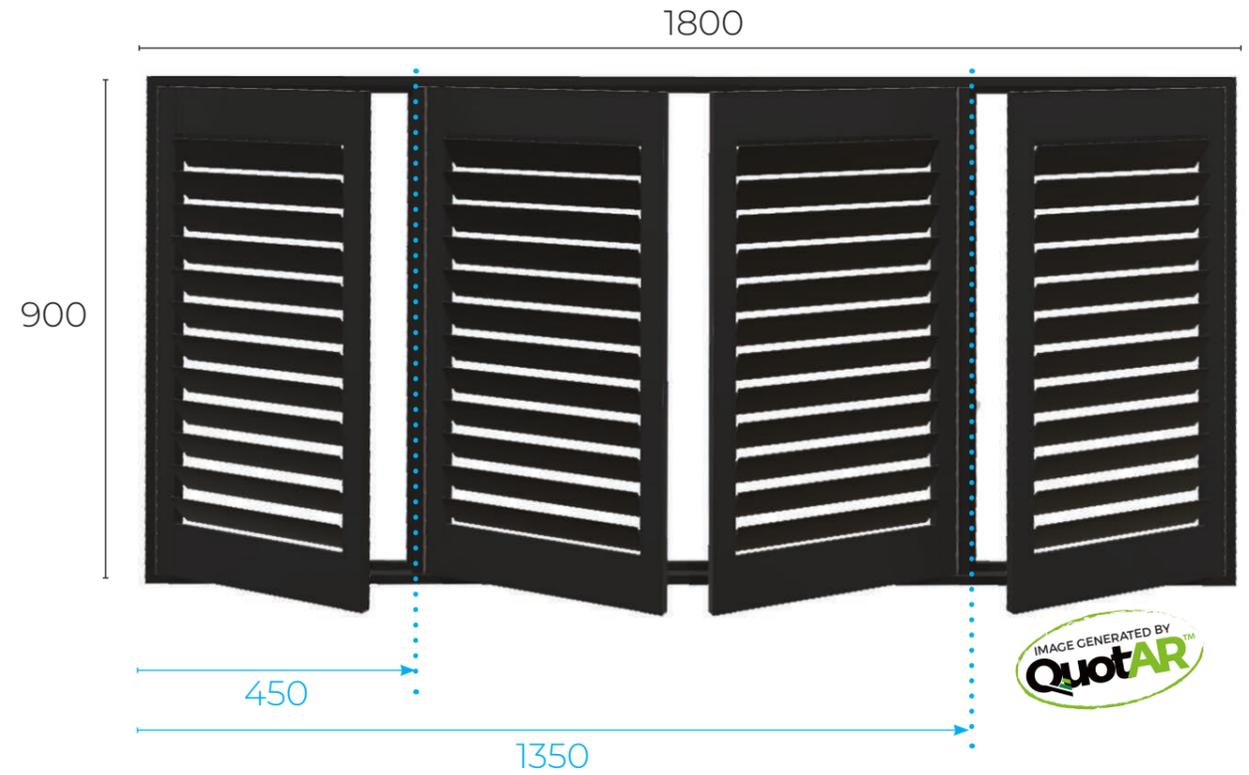

### HINGE MOUNT COLOUR OPTIONS

### FRAME SIDES

## HINGED MEASURING T POST

When Measuring for T-post positions always measure from the far left to the centre of the T-post. If you do not nominate a T-post position the panels will be made even width and positioned as per your Layout Code.

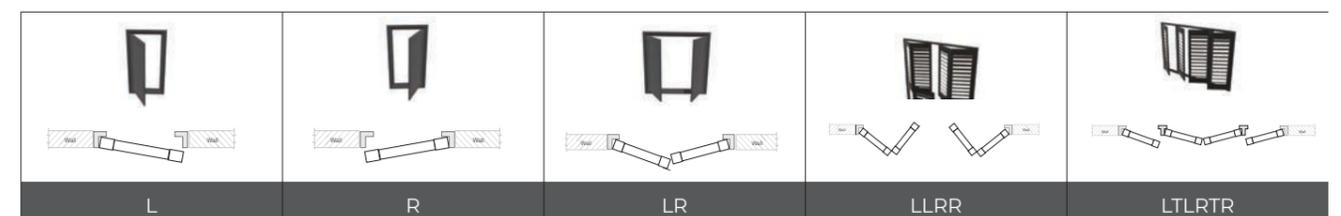

Ordering online: With every "T" entered in the Layout Code a box will appear for you to enter the post position.

Layout Code:

1st T  2nd T

## HINGED / FRAMED LAY OUT CODES

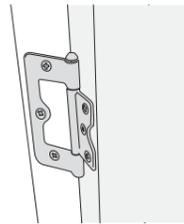

Layout codes are one of the most important aspect to understand when ordering shutters. The design of the layout codes tells us how many panels/posts are in an item as well as what side the hinges are one. A layout code should always be designed starting from the left. With Hinged shutters – L=Left hinge, R= Right hinge, T=T-post. No other letters are needed in the layout code. Some examples are below.

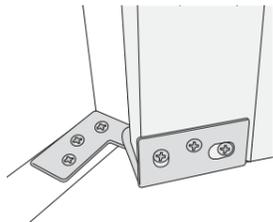

## BAY WINDOW OPTIONS

### HINGE TYPES

NON MORTISE HINGE

PIVOT HINGE

### HINGE MOUNT COLOUR OPTIONS

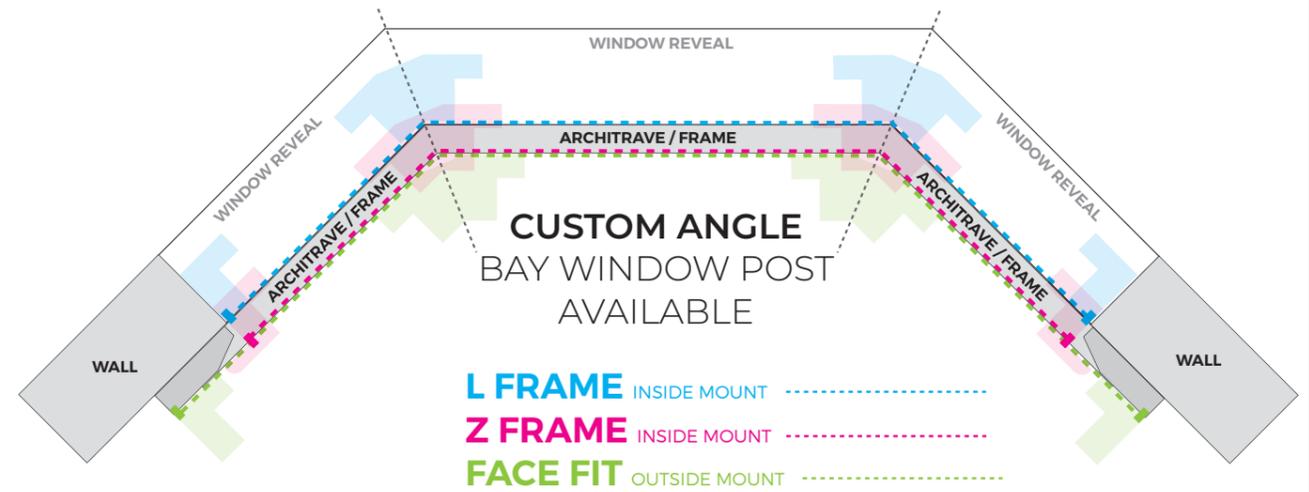

### FRAME SIDES

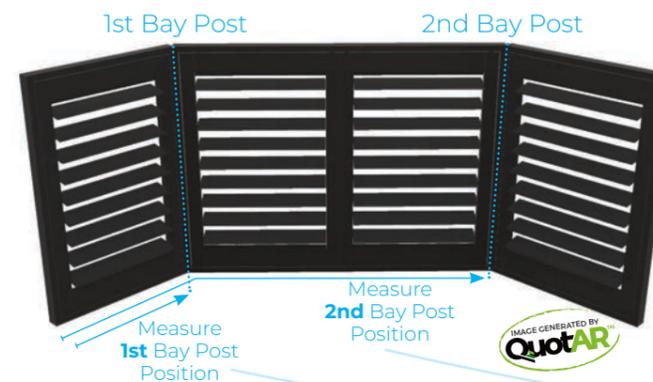

## MEASURING BAY WINDOWS WITH DIFFERENT FRAMING OPTIONS

When measuring for Bay or Corner Windows there are other factors to consider. Inside mount/Outside mount changes the sizes dramatically. With inside mount you are giving us the front of frame size and outside mount is the Back of frame size. Also if you are using a Z-frame you have to make sure to take in to account the architrave thickness and supply the size to the front of the architrave. See diagram below.

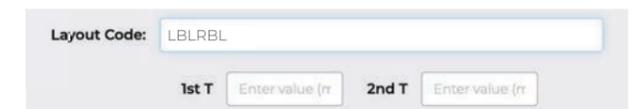

### BAY WINDOW MEASURING POST

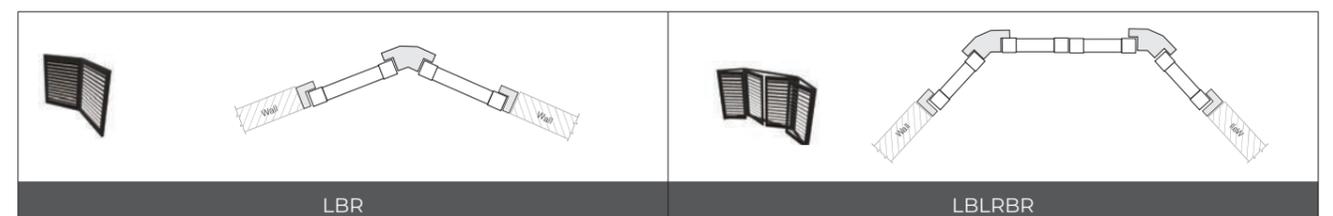

When Measuring for post positions always measure from the far left to the centre of the post. If you do not nominate a post position the panels will be made even width and positioned as per your Layout Code.

Ordering online: With every "T" or "B" entered in the Layout Code a box will appear for you to enter the post position.

### BAY WINDOW / FRAMED LAY OUT CODES

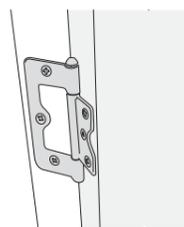

Layout codes are one of the most important aspect to understand when ordering shutters. The design of the layout codes tells us how many panels/posts are in an item as well as what side the hinges are one. A layout code should always be designed starting from the left. With Bay Windows – L=Left hinge, R= Right hinge, T=T-post, B=Baypost. No other letters are needed in the layout code. Some examples are below.

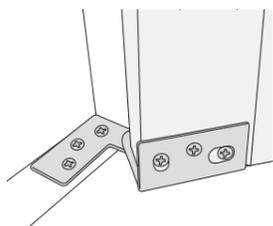

## CORNER WINDOW OPTIONS

When measuring for Bay or Corner Windows there are other factors to consider. Inside mount/Outside mount changes the sizes dramatically. With inside mount you are giving us the front of frame size and outside mount is the Back of frame size. Also if you are using a Z-frame you have to make sure to take in to account the architrave thickness and supply the size to the front of the architrave. See diagram below.

## CORNER WINDOW MEASURING POST

When Measuring for post positions always measure from the far left to the centre of the post. If you do not nominate a post position the panels will be made even width and positioned as per your Layout Code.

Ordering online: With every "T" or "C" entered in the Layout Code a box will appear for you to enter the post position.

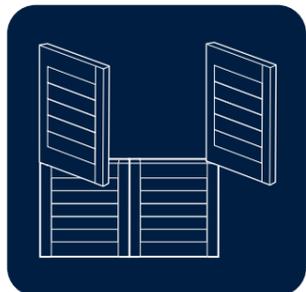

## CORNER WINDOW / FRAMED LAY OUT CODES

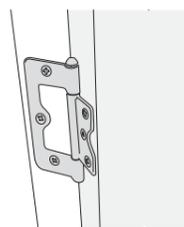

Layout codes are one of the most important aspect to understand when ordering shutters. The design of the layout codes tells us how many panels/posts are in an item as well as what side the hinges are one. A layout code should always be designed starting from the left. With Corner Windows – L=Left hinge, R= Right hinge, T=T-post, C=Corner post. No other letters are needed in the layout code. Some examples are below.

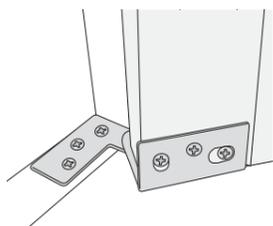

## TIER ON TIER OPTIONS

### HINGE TYPES

NON MORTISE HINGE

PIVOT HINGE

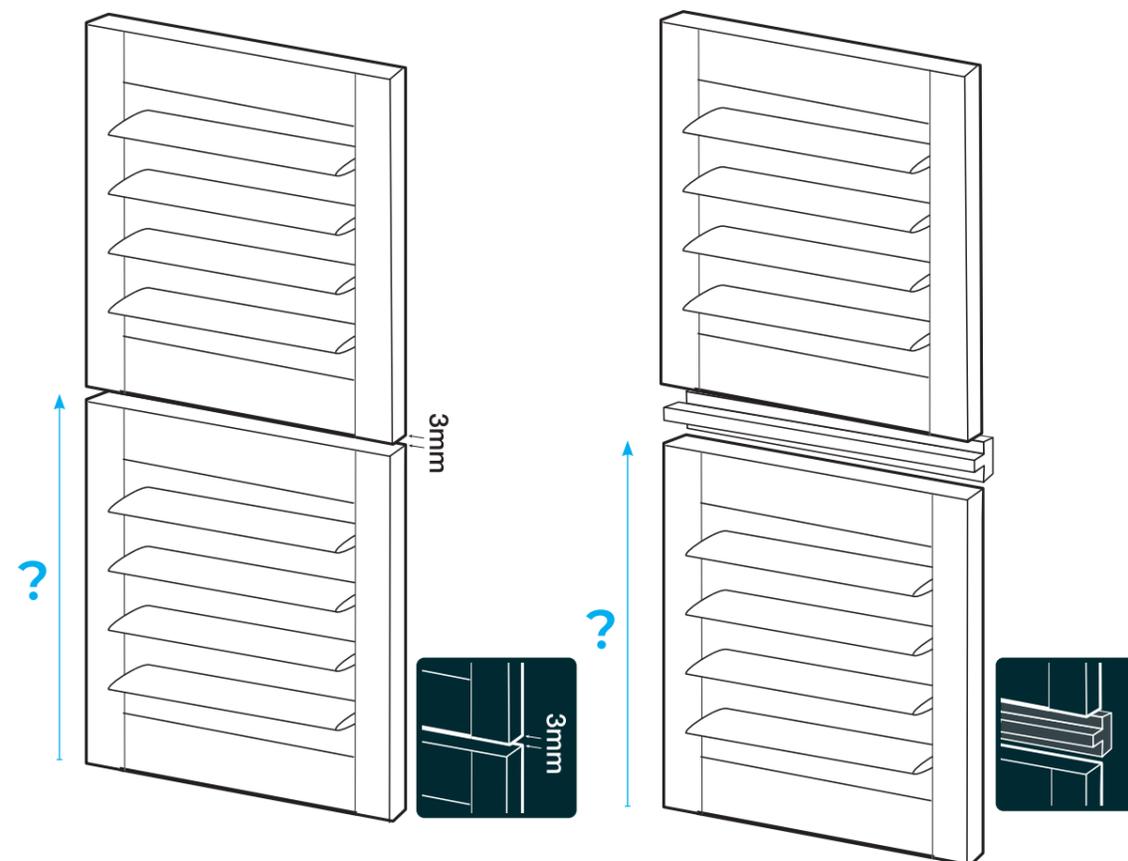

### HINGE MOUNT COLOUR OPTIONS

### FRAME SIDES

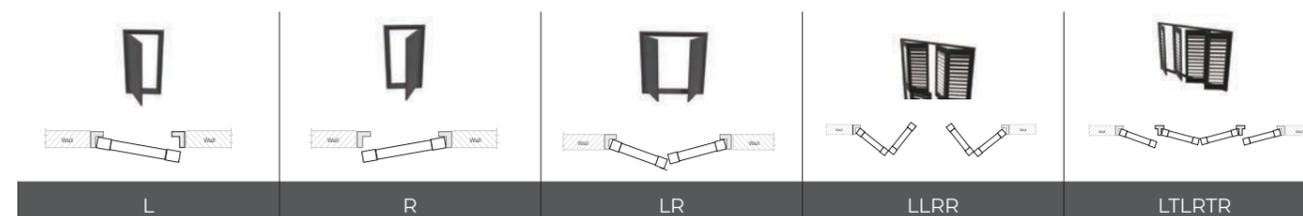

## TIER ON TIER MEASURING T POST

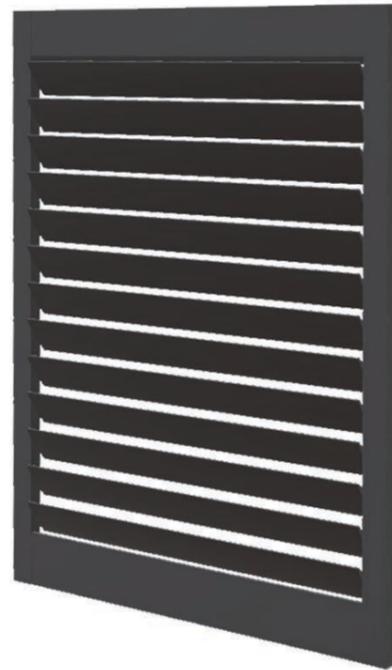

With Tier on Tier you choose if you want the panels split with a 3mm gap or a horizontal T-post between the top and bottom panels. Please provide us with the size from the bottom of the opening to the centre of the 3mm gap or horizontal T-post. For layout codes please order the same as standard hinged shutters ( See page 21 ). The factory will mirror the layout above and below the Tier on Tier Split. See examples below.

### TIER ON TIER / FRAMED LAY OUT CODES

Layout codes are one of the most important aspect to understand when ordering shutters. The design of the layout codes tells us how many panels/posts are in an item as well as what side the hinges are one. A layout code should always be designed starting from the left. With Hinged shutters – L=Left hinge, R= Right hinge, T=T-post. No other letters are needed in the layout code. Some examples are below.

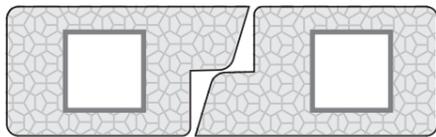

## FIXED OPTIONS

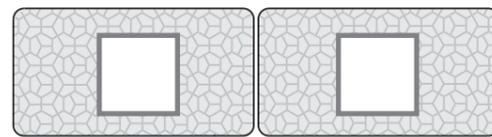

Fixed panels are generally ordered with U-channel top and bottom. However you can order them with standard frame as well. If you order Fixed panels with standard framing the factory will fix the panels in with magnets.

PLEASE NOTE - If the shutters are fixed only with magnets - CW Systems take no responsibility if the panels come loose. It is up to the installer to determine if they need to secure the panel in another way.

## STILE OPTIONS WITH U-CHANNELS

Rabbet Stile - Flat

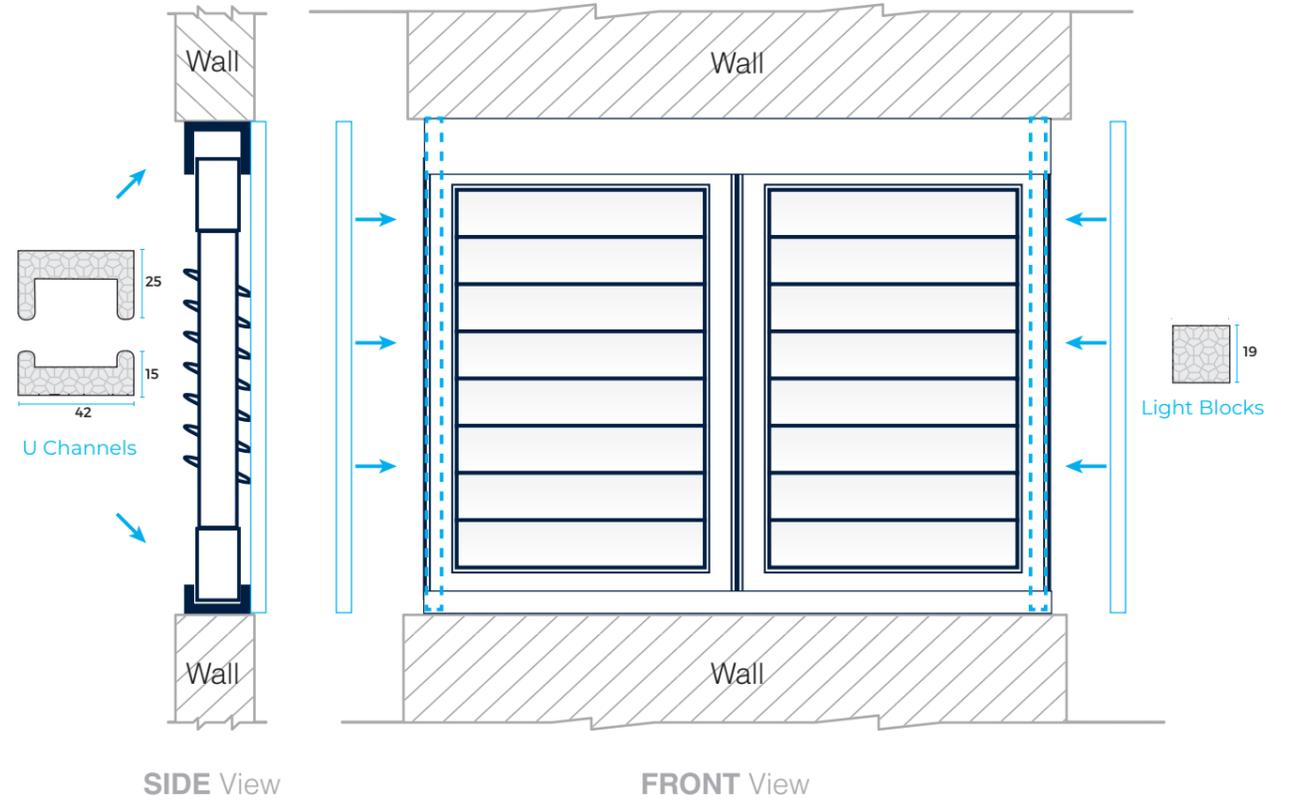

Square Stile - Flat

PLEASE NOTE NO D-MOULD OPTION AVAILABLE WITH U-CHANNELS

## FRAME OPTIONS

Please Note  
**Cafe Style Blinds**  
Select NO in you Top frame option to create Cafe style

## FIXED MEASURING T POST

## FIXED PANEL / FRAMED LAY OUT CODES

Layout codes are one of the most important aspect to understand when ordering shutters. The design of the layout codes tells us how many panels/posts are in an item. A layout code should always be designed starting from the left. With Fixed shutters - F=1 x fixed panel, T=T-post. No other letters are needed in the layout code. Some examples are below.

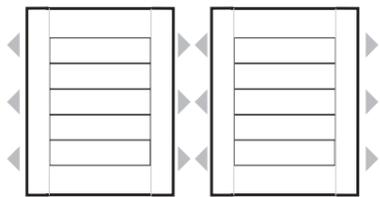

(If your item requires a mixture of hinges and fixed panels. Please go by the standard hinged product type/instructions on page 21 and use the notes to tell use what panels are fixed).

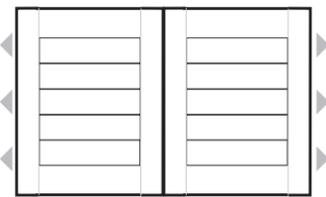

## SLIDING OPTIONS

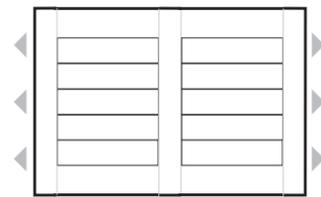

### SLIDING PANEL TYPES

**STANDARD PANELS**  
Panels slide independently

**CO - JOINED PANELS**  
Separate panels joined with hinges so they slide as one.

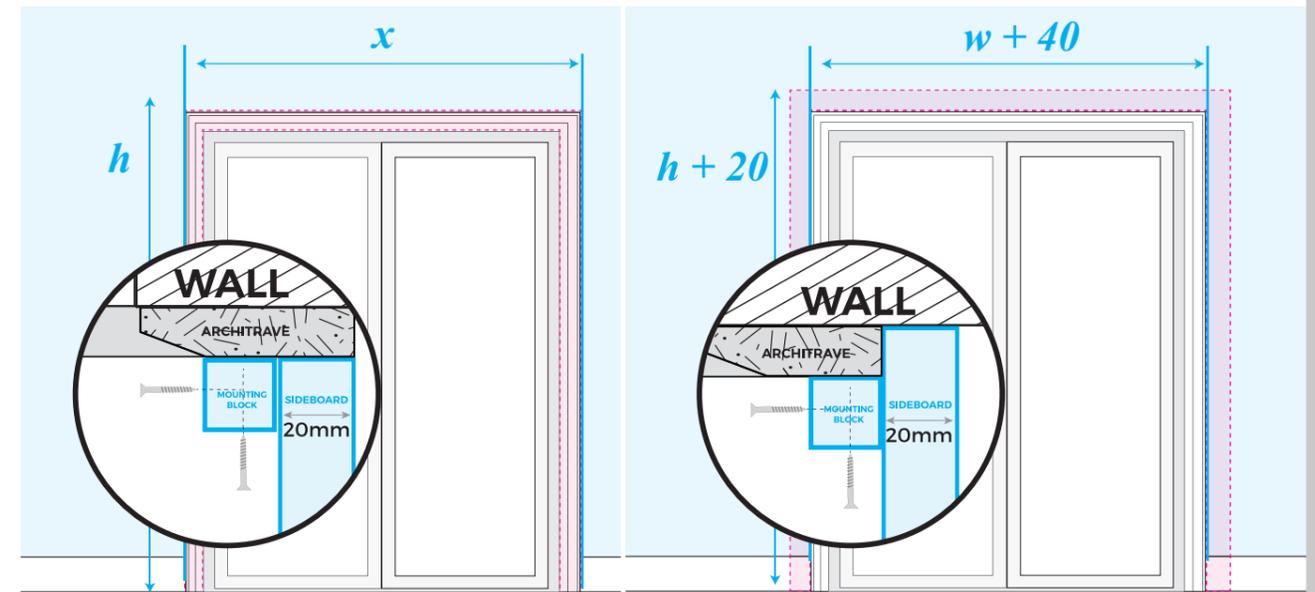

**CENTRE STILE PANELS**  
A 60mm stile down the centre of the panel. Available in Basswood only.

### FRAME OPTIONS

**Please Note**  
Select "No" for any sides you do not want side/bottom boards. If you have "Yes" selected at the bottom the factory will automatically rebate the bottom frame into the bottom board.

## FACE MOUNT SLIDING PANEL MEASUREMENT

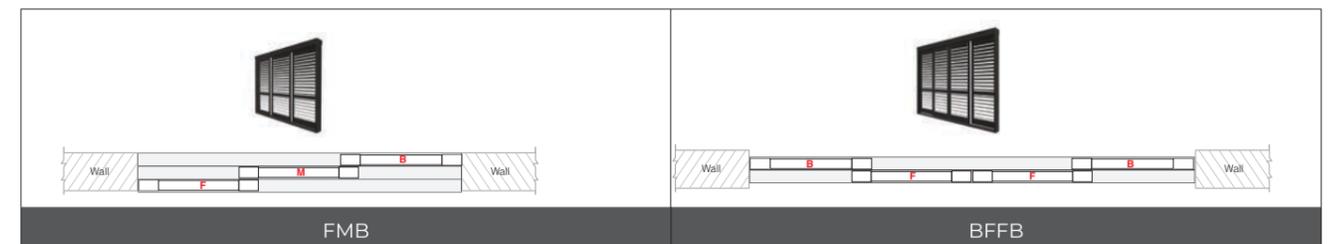

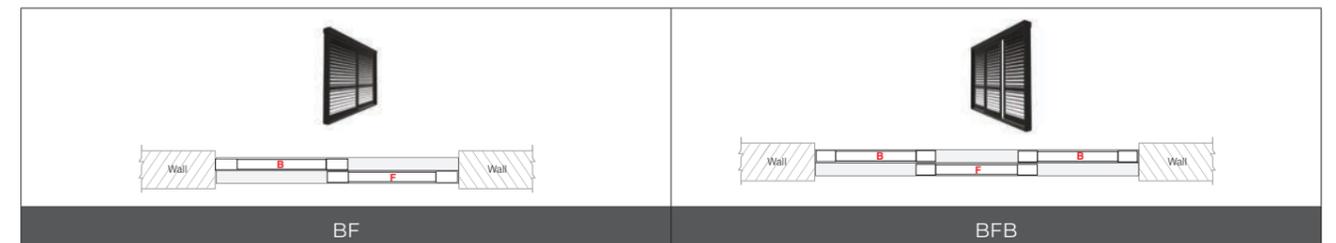

Installation **ON FACE** of architrave.  
Measure to the outside of the architrave

Installation **AROUND** the architrave  
Measure to the outside of the architrave then add 20mm to the height and 40mm to the width

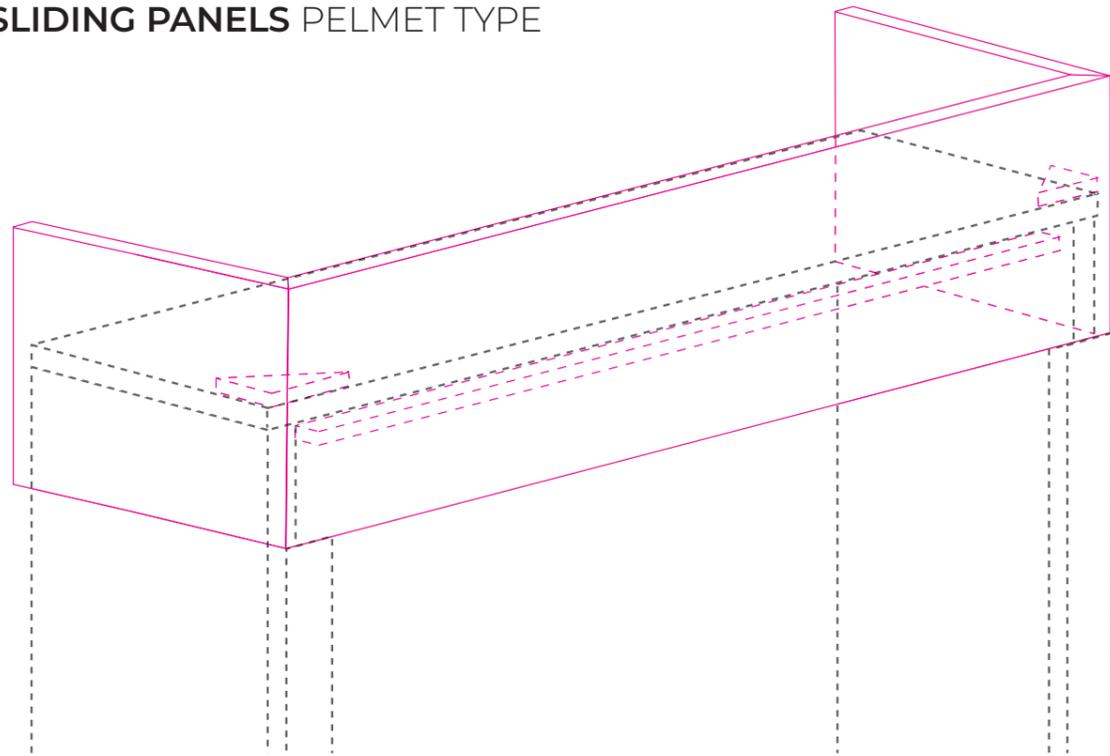

### SLIDING / FRAMED LAY OUT CODES

Layout codes are one of the most important aspect to understand when ordering shutters. The design of the layout codes tells us how many panels/tracks are in an item as well what panel is on what track. A layout code should always be designed starting from the left. With Sliding Shutters – F=1 x Panel on Front Track, B= 1 x Panel on Back Track, M=1 x Panel on Middle Track. If you are using Co-Joined panels each should be in the layout (ie FFBB) and the factory will automatically join them if Co-joined is selected. See example below.

**DOUBLE**  
INTERNAL WALL OPTION NO RETURNS

# SLIDING OPTIONS

### Top Rolling with Floor Guide

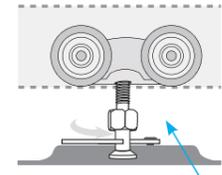

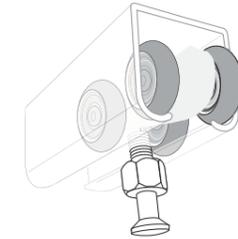

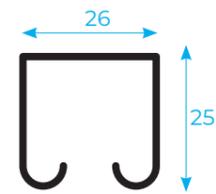

Floor Guide mounted directly to floor/ bottom board. Groove cut into bottom of panel to go over floor guide. REMEMBER to select "No" on bottom frame if no bottom board is needed.

# SLIDING PANELS TRACKING SYSTEM

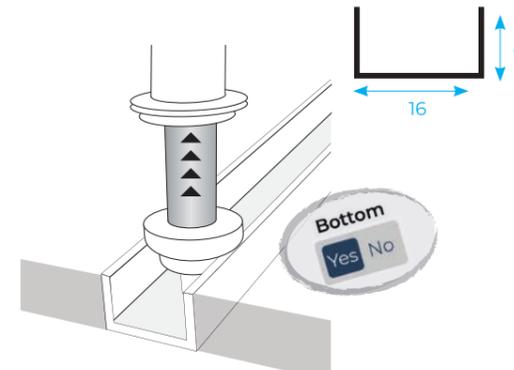

## Top Rolling Track System (T25)

top track and top carrier

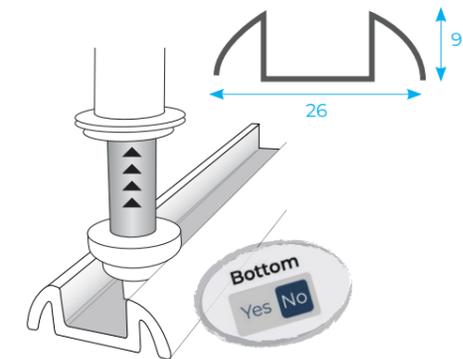

Height adjustment Screw

## Top Rolling with Bottom Track

### U-Track recessed in Bottom board

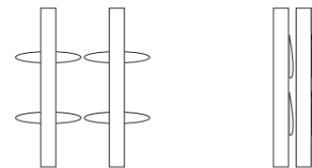

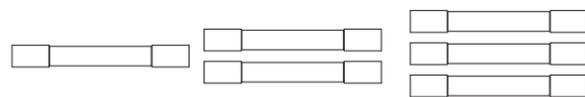

Select "Yes" for the bottom frame to order this

### M-Track sits on Floor

Select "No" for bottom frame to order this.

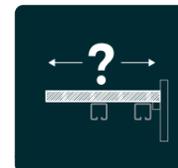

## Sliding Panels Track Quantity

The layout Code will tell us they Track qty needed. On the online system it will be automatically selected.

Sliding Open – This means we space the tracks far enough apart so that the panels will Slide past without hitting each other even with the blades tilted open. The factory will provide Light block to attached to the panels if this is selected.

Sliding Closed – The factory will space the track as close as possible to each other. The blades will need to be fully tilted closed to slide the panels.

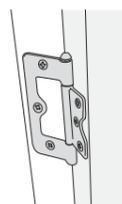

After selecting entering the layout code, Blade type, and Sliding Open or closed the Online Ordering system will automatically come up with the available frame depths. Also See frame depth chart below.

	Sliding Frame Depths (Clearview Tilt)			Sliding Frame Depths (Centre Tilt)		
	Min.	Standard	Face fit (around Arch.)	Min.	Standard	Face fit (around Arch.)
Closed (all blades)	115mm	120mm	140mm	130mm	140mm	160mm
63mm - open	150mm	150mm	170mm	170mm	180mm	200mm
89mm - open	190mm	200mm	220mm	210mm	210mm	230mm
114mm - open (not recommended)	225mm	230mm	250mm	250mm	250mm	270mm

## BI FOLD WITH TRACK

IMAGE GENERATED BY  
**QuotAR™**

NON MORTISE HINGE

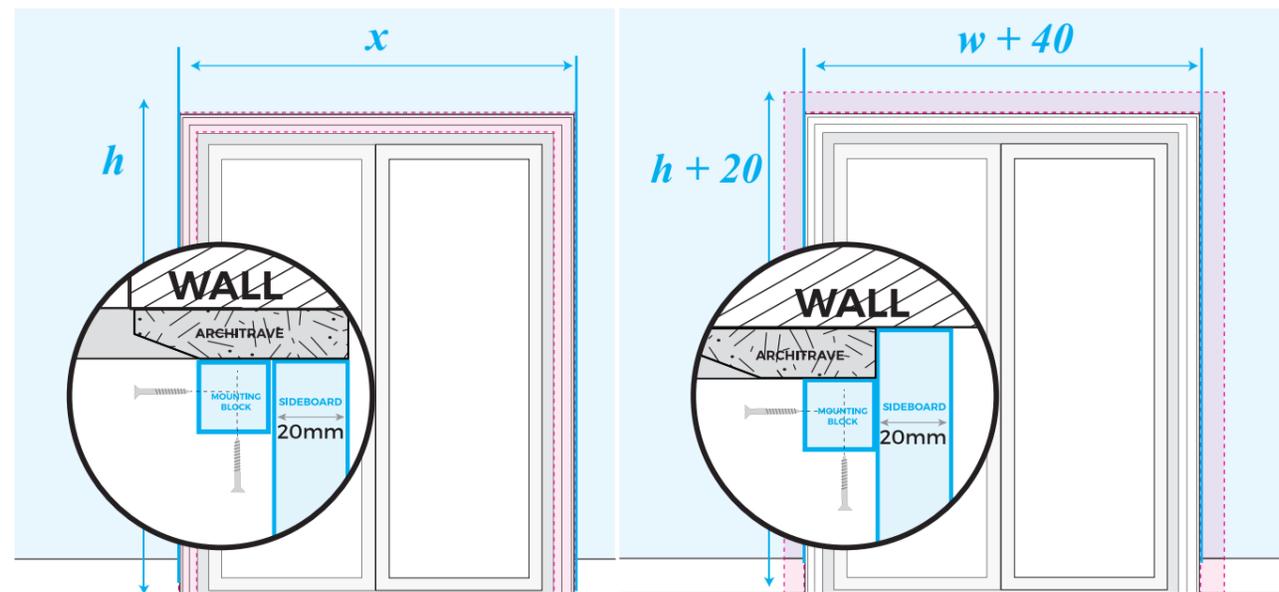

### HINGE MOUNT COLOUR OPTIONS

### FRAME OPTIONS

**Please Note**  
Select "No" for any sides you do not want side/bottom boards. If you have "Yes" selected at the bottom the factory will automatically rebate the bottom frame into the bottom board.

## FACE MOUNT BI FOLD PANEL MEASUREMENT

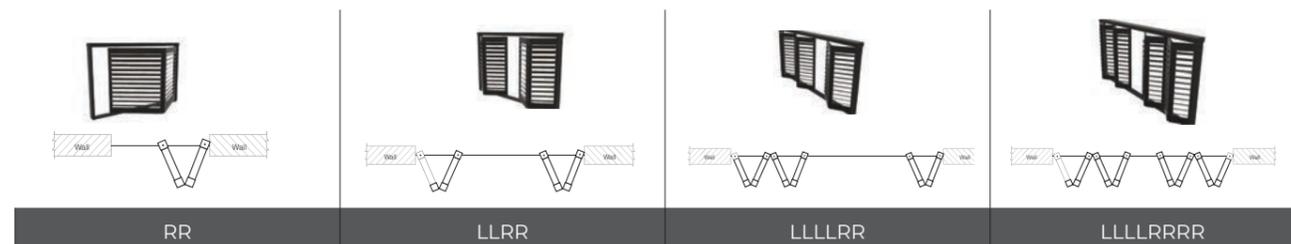

Installation **ON FACE** of architrave.  
Measure to the outside of the architrave

Installation **AROUND** the architrave  
Measure to the outside of the architrave then add 20mm to the height and 40mm to the width

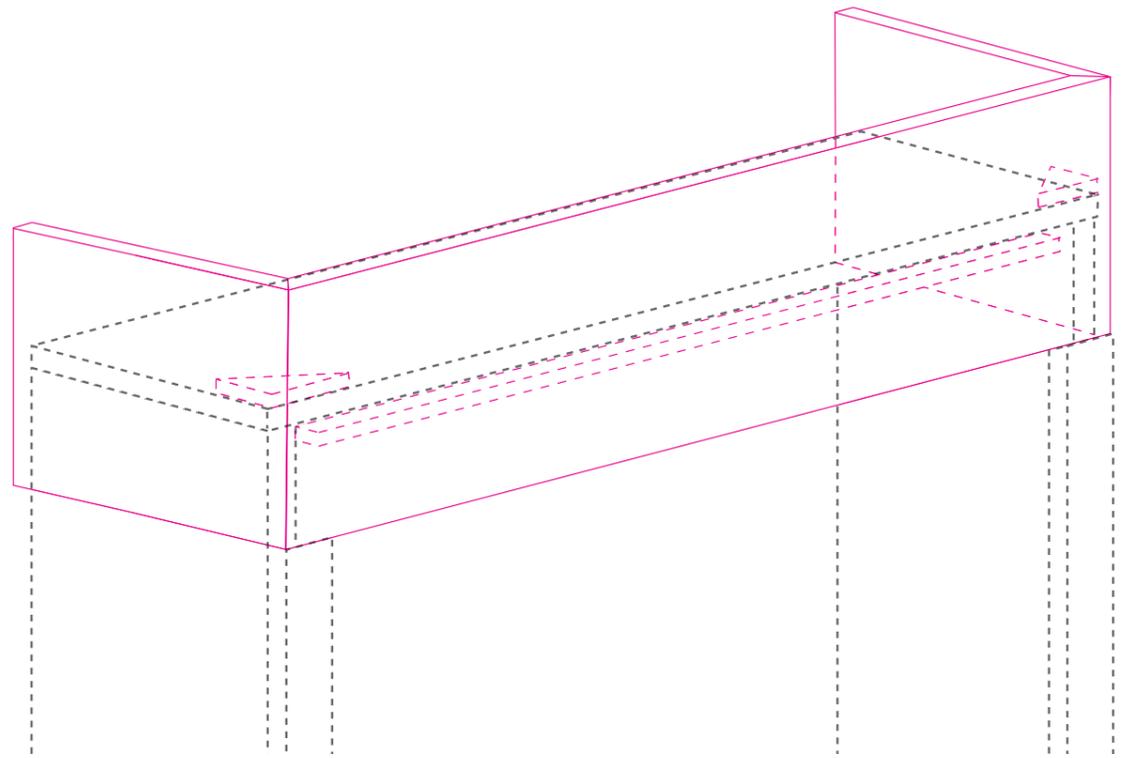

### BI FOLD / FRAMED LAY OUT CODES

Layout codes are one of the most important aspect to understand when ordering shutters. The design of the layout codes tells us how many panels are in an item as well as what side the hinges are one. A layout code should always be designed starting from the left. With Bi-Fold shutters – L=Left hinge, R= Right hinge. No other letters are needed in the layout code. It is recommended to always have the panels fold in pairs so that the panel returns to the track. If you have an odd number of panels the last panel will be swinging independently and the factory does not supply any hardware to hold it in place. Some examples are below.

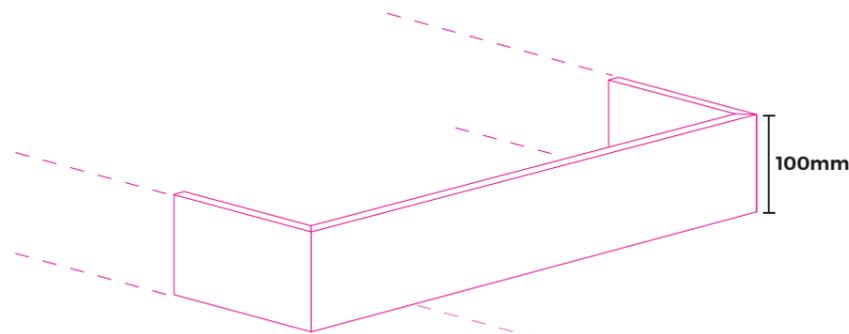

# BI FOLDS OPTIONS

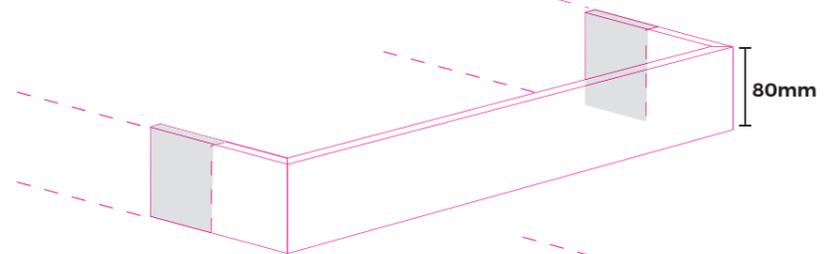

## BI FOLD PANEL PELMET TYPES

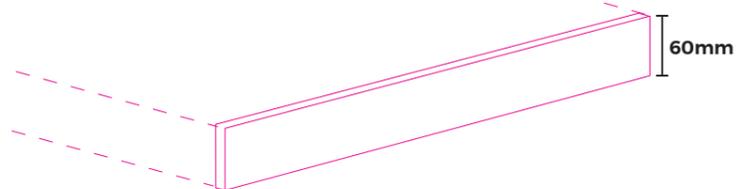

**OUT - PELMET**  
40mm above headboard

**SEMI - PELMET**  
20mm above headboard

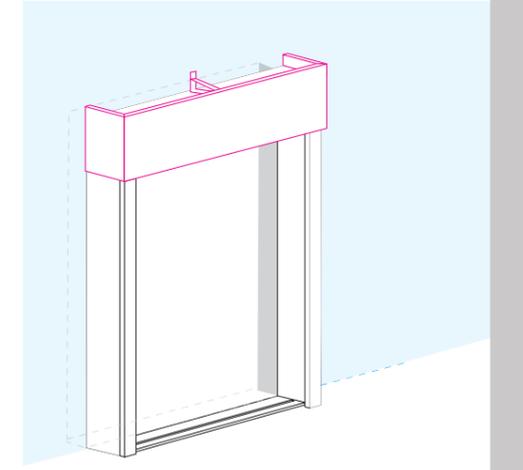

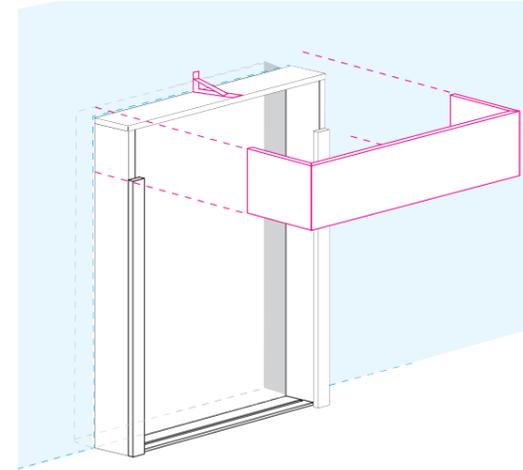

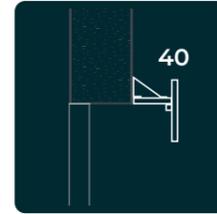

**IN - PELMET**  
Flush to top - no return

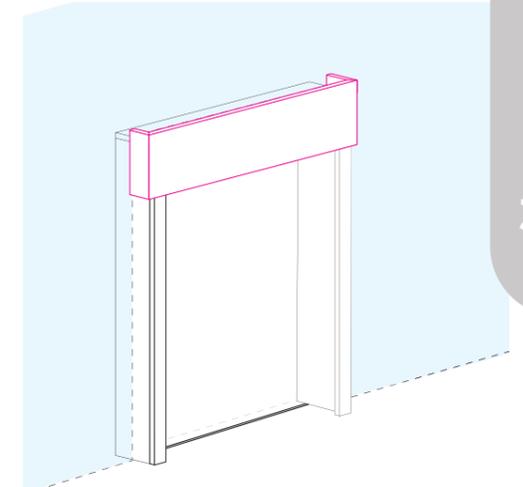

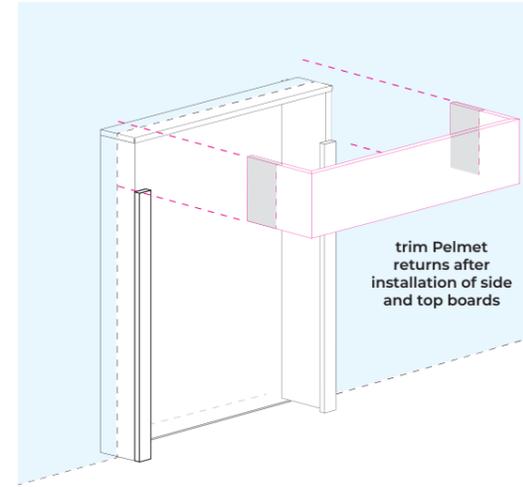

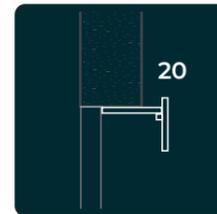

## Sliding Panels PELMET TYPE

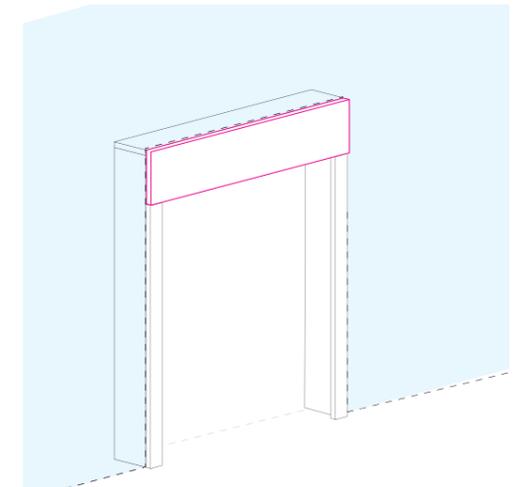

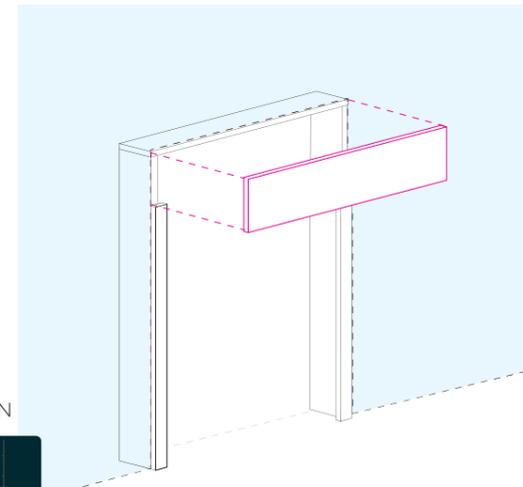

**OUT**  
40MM ABOVE BOARD W/RETURNS

**SEMI**  
20MM ABOVE BOARD W/RETURNS

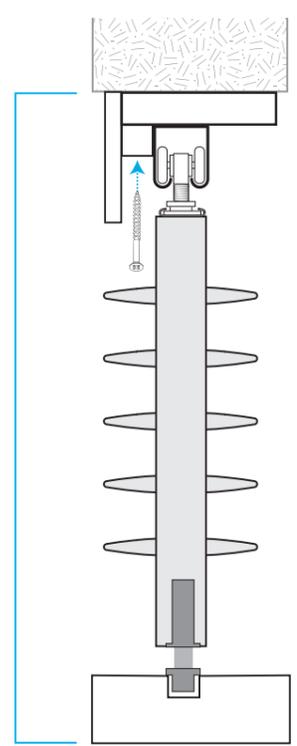

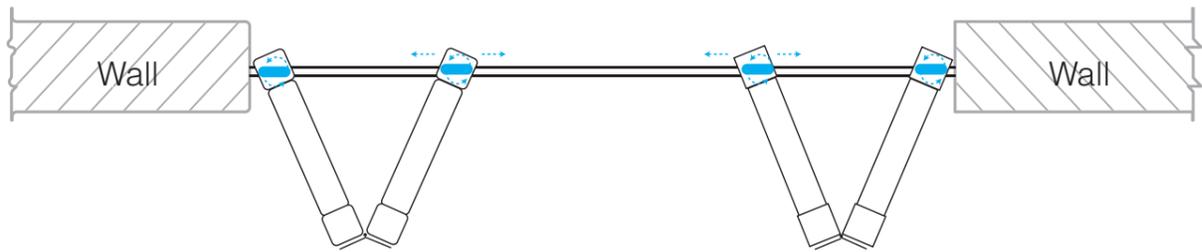

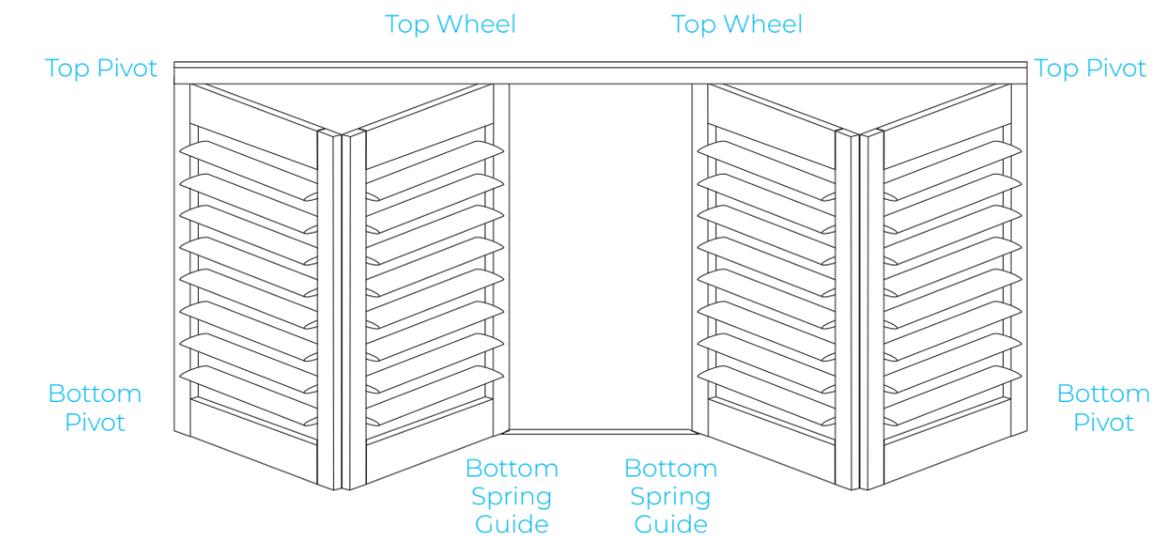

**IN / DOUBLE**  
FRONT AND BACK NO RETURNS

**DOUBLE**  
INTERNAL WALL OPTION NO RETURNS

# BI FOLDS OPTIONS

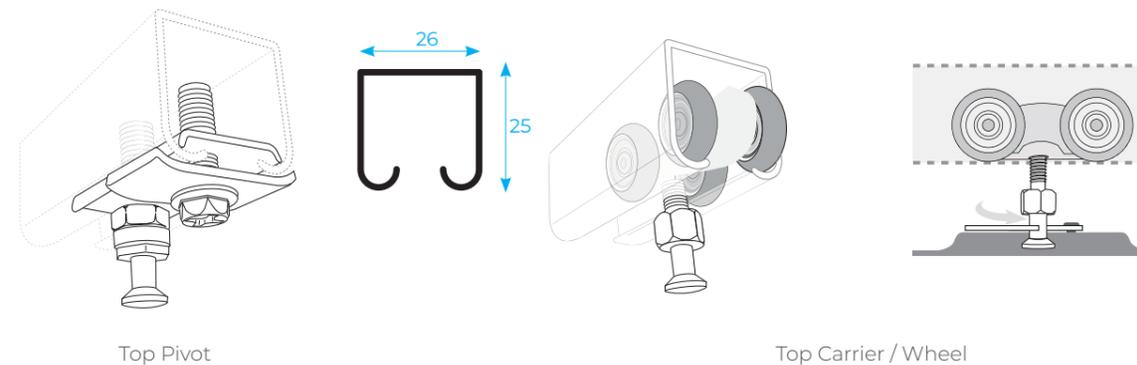

The minimum Frame depth needed for bi-folds is 100mm. This allows for the panels to pivot. If you are face fitting around the outside of an architrave order 120mm frame to allow for the thickness of the architrave.

		
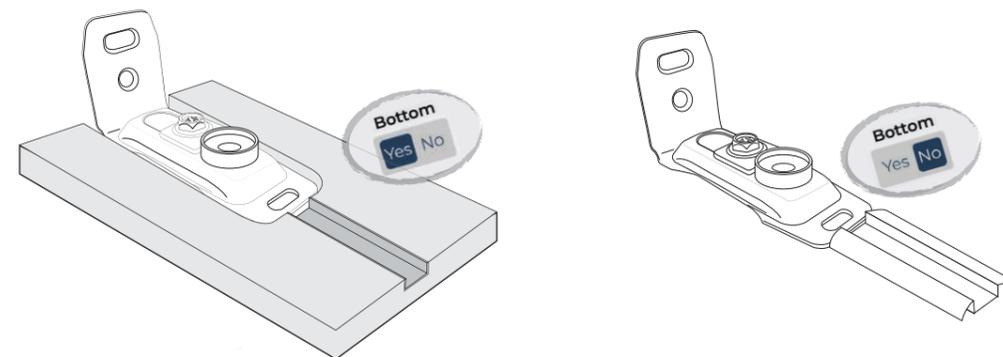

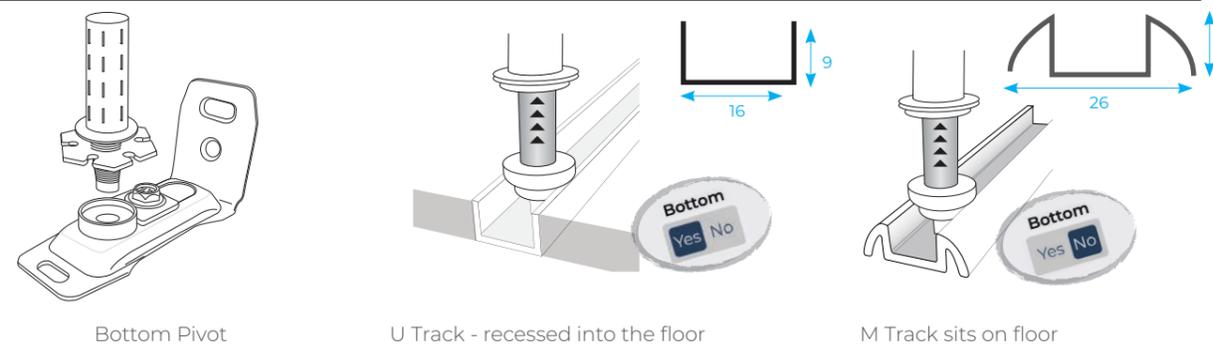

100mm (std)	120mm	80mm

## Top Rolling Track System (T25)

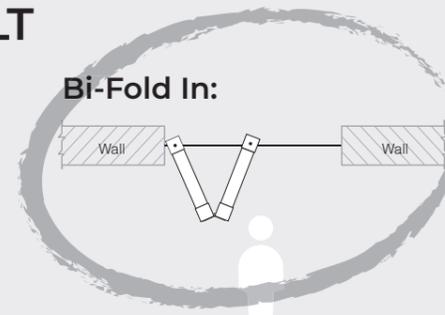

top track and Carrier

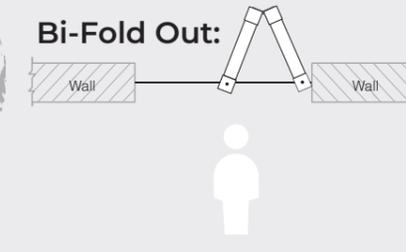

bottom track

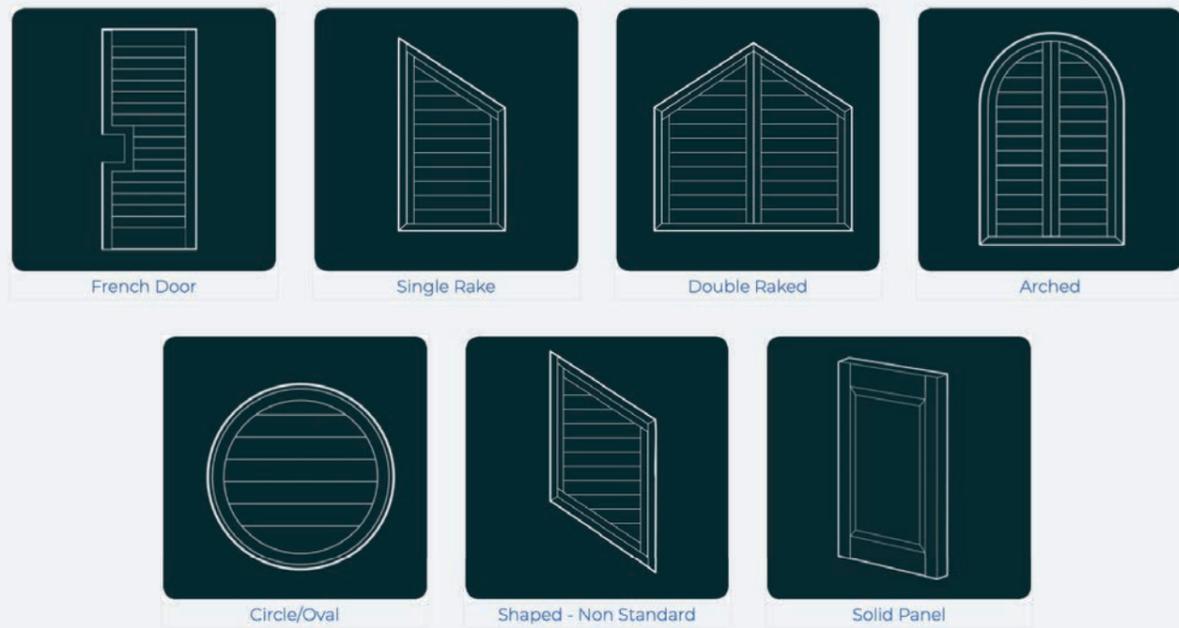

### DEFAULT

SPECIAL ORDER REQUEST IN THE NOTES

## SPECIALTY OPTIONS

### Ordering Specialty Shutters - providing a template

Not all Shaped shutter orders need templates. If the window is raked (All straight edges) or arched with a standard continuous arch it can be measured and drawn in a diagram.

**• Always provide a diagram with your order.**

• Make sure the diagram sizes match up with the order form and Template (if any).

**• If the shutter needs a template.**

Use one of the following materials (avoid anything that can shrink or crease).

- Good Quality Kraft / Butchers Paper
- Roller blind fabric
- 2-3mm thick MDF board

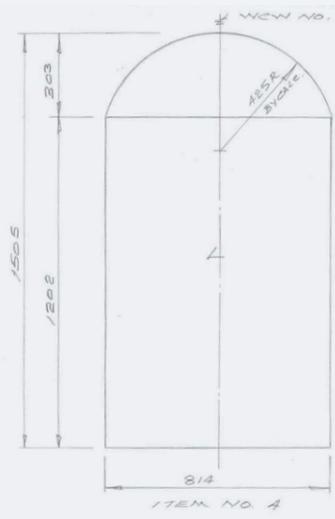

**• How to handle the Template**

- Never fold it! – Roll it up and send it in a cardboard tube.

- Make sure the template is in 1 piece – if you are joining pieces of material to make a template make sure they are securely joined before you measure the window. Joining them after the fact can cause issues.

**• What should be on the template**

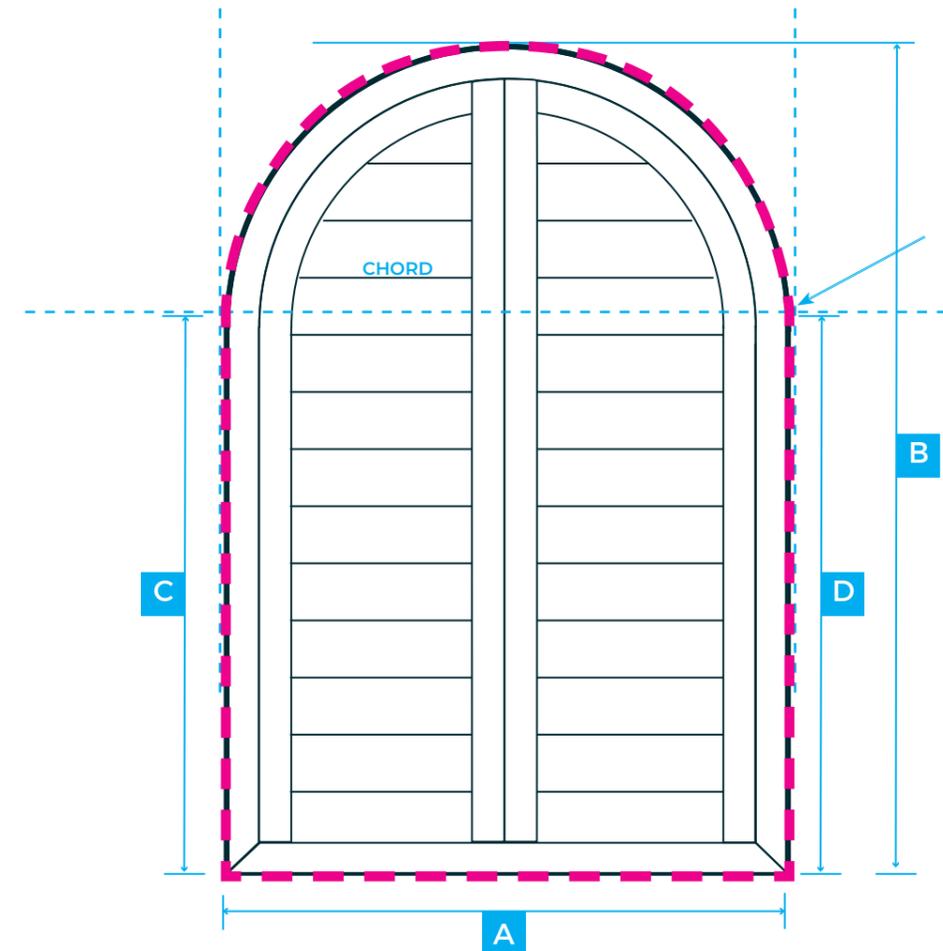

- Company Name, Order name/No., Item number on order
- Mark the "Face" of the template
- Check and write the dimensions on the template. Make sure they agree with the order form.

You can send a picture of the window with the order. This will help us check if there are any omissions on the order.

C. Left Height:	<input type="text" value="C. Left Height"/>	
D. Right Height:	<input type="text" value="D. Right Height"/>	

Not confirmed

Hint: Make sure to check that the 90° right angle corners are actually 90°. Also send a diagram showing the sizes along each rake. This is a good check for the factory that all sizes are correct.

#### OPTIONS SHAPED BLADE END

**Horizontal Stepped Blades**

Available in Basswood and Paulownia

- The rails are stepped so that the blades are straight cut and not shaped.
- Blades can rotate fully in both directions
- Use standard type blade pins – easily to change a blade

**Horizontal Shaped Blades**

Available in Basswood, Thermo 25 and Paulownia

- Blades are shaped to suit the shape of the shutter
- Blades and rails are chamfered to allow the blade to rotate
  - If the shape is on the top half of the panel the chamfer will be on the back of the panel.
  - If the shape is on the bottom half of the panel the chamfer will be on the face of panel.
- You cannot fully rotate the blades. They will fully close and the amount the blades will be able to open depends on the shape.
- Special Pins are used
- If a blade is needed to be replaced, the original blade must be sent back to the factory.

Top Rake      Bottom Rake

Choose if the rake is at the bottom or the top.

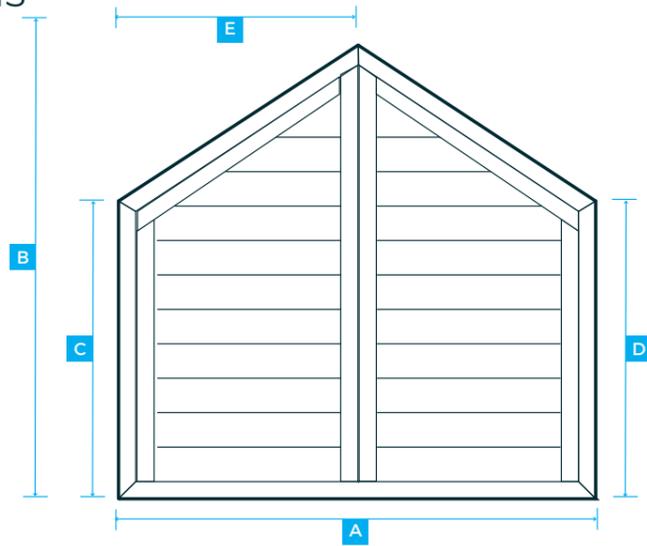

L - FRAME VS Z - FRAME

Z Frame can give up to 40mm tolerance around the frame for those tricky jobs!

**HINT ?**  
Z frames make it EASY

- Available in Basswood only
- Blades are custom shaped and pivot from a centre point (like the spokes on a bicycle tire)
- All blades rotate individually
- No tilt rod to connect the blades.

**L - FRAME**  
VS  
**Z - FRAME**

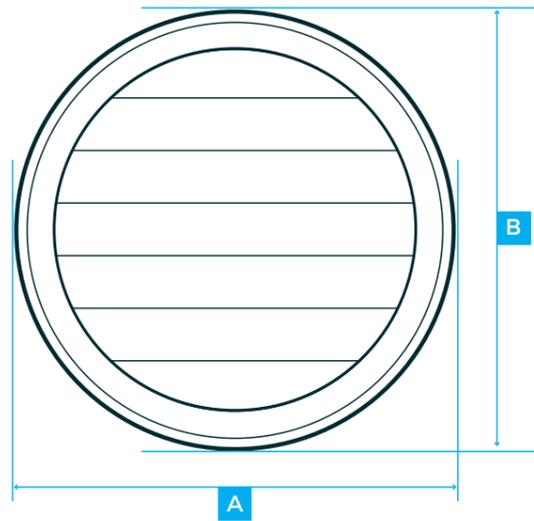

**Z Frame can give up to 40mm tolerance around the frame for those tricky jobs!**

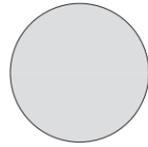

**HINT ?**  
Z frames make it EASY

## SPECIALTY OPTIONS

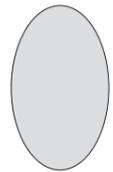

### CIRCLE / OVAL OPTIONS

**HINT ?**  
Template required

**Diagram ONLY**  
Circle with standard radius

**Diagram and Template required**  
Circle with multiple radius' and / or asymmetrical arch

### SPECIFY MEASUREMENTS

A. Width:

B. Height:

Not confirmed

### OPTIONS SHAPED BLADE END

**Horizontal Stepped Blades**  
Available in Basswood only

- The rails are stepped so that the blades are straight cut and not shaped.
- Blades can rotate fully in both directions
- Use standard type blade pins
- easily to change a blade

**Horizontal Shaped Blades**  
Available in Basswood only

- Blades are shaped to suit the shape of the shutter
- Blades and rails are chamfered to allow the blade to rotate
  - If the shape is on the top half of the panel the chamfer will be on the back of the panel.
  - If the shape is on the bottom half of the panel the chamfer will be on the face of panel.
- You cannot fully rotate the blades. They will fully close and the amount the blades will be able to open depends on the shape.
- Special Pins are used
- If a blade is needed to be replaced, the original blade must be sent back to the factory.

**Sunburst blades**  
Available in Basswood only

- Blades are custom shaped and pivot from a centre point (like the spokes on a bicycle tire)
- All blades rotate individually
- no tilt rod to connect the blades.

**HINT ?**  
Ask for CAD...

On the order details page just before you submit an order you can request we send you the factory CAD drawings before production begins. This is a good double check for you to make sure the order is correct.

Additional Notes

Notes

## SPECIALTY OPTIONS

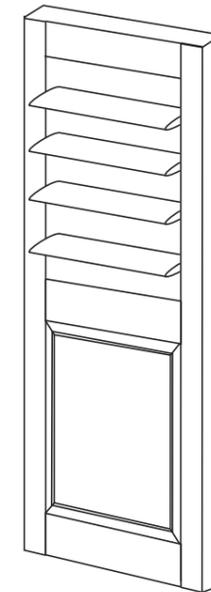

### FULL SOLID PANEL

**Full Solid panel**

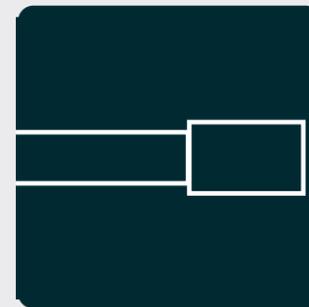

Solid infills where blades typically are. The rail and stiles are assembled the same as standard panels.

### HALF SOLID PANEL

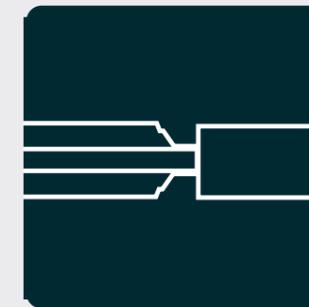

**Half Solid panel**

Typically the bottom half has the solid infills and the top half as standard blades.

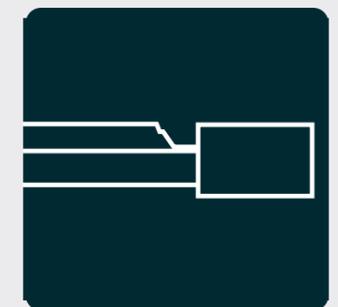

**FLAT Shaker Style**

Solid Basswood infills flat on both sides. Available in painted and stained.

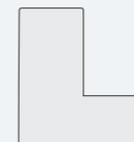

**RAISED Double Sided**

Solid Basswood infills flat on both sides. Available in painted and stained.

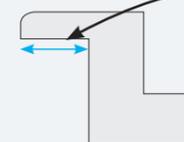

**RAISED Single Sided**

MDF infills with a bevel edge around the edge of the infill on the face of the panel and a flat finish on the back of the panel. Available in painted only.

**L - FRAME**

\*"Mid rails are recommended on all Thermo25 panels higher than 1600mm, the absence of mid rails may cause issues with closure particularly on wide double hinged panels. (LL or RR). Please also be advised that sagging on panels over 1600mm in height with no mid rail is not covered by warranty as this is outside of the specified product guidelines and intended product use."
